

## Warren Board Sales Limited

### Environmental Policy

We are an independent stockist and converter, offering a range of packaging, graphical and point of sale boards and paper products to customers in the UK and Europe. Our product range includes paper and board made from both recycled fibre and recyclable virgin fibre. We source these from manufacturers worldwide, distribute them from our centre of operations in Leicester and offer reel to sheet conversion services from our manufacturing plant in West Bromwich.

We recognise the need to minimise the impact of our business on the environment and are committed to integrating ISO 14001 into our business activity and to continuing compliance with the standard. We will:

- Explain our policy and maintain a dialogue on environmental issues with staff, customers and suppliers.
- Fulfil our compliance obligations, including all relevant environmental legislation and other environmental requirements to which we subscribe.
- Protect the environment by preventing any avoidable pollution or nuisance that may be caused by our activities.
- Improve our environmental performance continually by setting realistic objectives.
- Minimise the waste we generate and send to landfill by reviewing our use of consumables and raw materials, and maintaining or increasing the volume and range of materials we recycle.
- Use resources in a sustainable manner by monitoring, reviewing and minimising our consumption of energy, fuel and other natural resources.
- Continue to work with customers and suppliers to minimise the impact of our product delivery miles.

We endorse the principles of responsible forestry and ensure that the timber used in our virgin fibre range comes from well managed forests where replanting programmes ensure that more trees are planted than felled. We support this initiative through our Chain of Custody certification and by meeting our legal obligations in respect of EU Timber Regulations.

We will review our environmental policy and objectives periodically, to ensure that they remain relevant and effective.

David Whitaker  
Operations Director
